Synthesis, Reactions and Antimicrobial Activity on Some Novel Phthalazinone Derivatives

Fatehia K. Mohamed
Chemistry Department, Faculty of Science, Fayoum University, Fayoum, Egypt.

A simple and efficient synthesis of [4-(3, 4-dimethylphenyl)-5, 6, 7, 8-tetrabromo-1-oxo-1H-phthalazin-2-yl]-acetic acid hydrazide (IV) has been carried out. The obtained hydrazide (IV) has been used in synthesis of some interesting heterocycles such as pyrazolone, thiazolidinone, pyrimidine, benzoaxine lactam, rhodanine, quinazoline and benzoaxinone (VIII–XVII). Some of the prepared compounds tested for in vitro antibacterial activities. Among those tested, many compounds showed good antibacterial activities.

Keywords: Phthalazinone, Pyrazolone, Thiazolidinone, Azitidinone, Quinazoline, Pyrimidine derivatives and Antimicrobial activity.

The synthesis of new heterocycles containing phalazine moiety are examples of nitrogen heterocycles that possess exciting biological properties (1-3). Phthalazine has been reported to possess anticonvulsant (4-6), antifungal activity (7) and vasorelaxant activities (8). Additionally, phthalazines have recently been reported to potentially inhibit serotonin reuptake and are considered as anti-depression agents (9,10).

Results and Discussion

In the present work, the phthalazine derivative (II) has been obtained via the condensation of the aroyl benzoic acid (I) with hydrazine hydrate in boiling ethanol (11,12). The structure of (II) was inferred from elemental analysis and the IR spectrum, which showed stretching bands at 3309, 1706 and 1620 cm\(^{-1}\) corresponding to NH, C=O and C=N groups, respectively. The H\(^1\)NMR spectrum revealed the appearance of singlet signal at \(\delta\) 7.2 ppm attributed to the amic proton (NH-CO), in addition to signals at \(\delta\) 7.45-7.67 ppm attributed to 3 aromatic protons and singlet at 2.34 (s,6H,2Ar-CH\(_3\)). EIMS showed the molecular ion peak at m/z 566.

Substituted phthalazine was prepared by reacting of (II) with chloroacetyl chloride to give chloroacetyl derivative (III). The IR spectrum of compound (III) showed stretching bands at 1751, 1685 cm\(^{-1}\) corresponding to the C=O of acid chloride and the C=O of cyclic amide. The H\(^1\)NMR spectrum of compound (III) revealed singlet at \(\delta\) 2.34 attributed to the two methyl protons and the methylenic

e-mail: koranymohammed@yahoo.com
protons appeared at δ 4.75 ppm (-N-CH₂-CO) also the aromatic protons appeared at δ 7.45-7.67. Such H¹NMR data agreed well with the proposed structure.

The structure of the acid chloride derivative (III) was further supported by its reaction with hydrazine hydrate in boiling ethanol, the corresponding hydrazide derivative (IV) was obtained. The IR spectrum of (IV) revealed the disappearance of C=O of acid chloride at 1751 cm⁻¹ and the appearance of one broad band at 1705 cm⁻¹ due to the C=O of amide and bands at 3263, 3312 cm⁻¹ assigned to the NH₂H₂ group. In addition, the EIMS spectrum of (IV) revealed m/z 553 which is consistent with M⁺-Br which decomposes to give the different fragments.

The hydrazide (IV) reacted with phenyl isocyanate (I3) in boiling benzene to give N'-phenyl amino carbonyl [4-(3, 4-Dimethyl-phenyl)-5, 6, 7, 8-tetramethoxy-2H-phthalazine-2-yl]-acetic acid hydrazide V. The IR spectrum, showed stretching bands at 3299 cm⁻¹ corresponding to NH group. H¹NMR spectrum exhibit multiplet signal at δ 7.45-7.67 due to 8 aromatic protons, singlet signal at 6.0 corresponding to NH₄NHCO protons and another singlet due to COH₅H₅ proton.

When the hydrazide (IV) and the acetyl acetone were fused together at 160°C gave the acetyl acetone monohydrazone (VI). The structure of (VI) was confirmed from IR spectrum, showed stretching bands at 3127, 1722, 1704 and 1669 cm⁻¹ due to NH, C=O of ketone ,CO of amide and C=O of cyclic amide. The ¹H NMR spectrum exhibit singlet at 2.34 due to 3H of COCH₃, 2.1 ppm due to N=C-CH₃ and 2.5 ppm due to 2H of CH₂COCH₃.

In a similar manner, fusion of a mixture of acetic acid hydrazide IV and acetic anhydride at 160°C afforded acetoxy-N-acetyl-N'-[2-(4-(3,4-dimethylphenyl)-5,6,7,8-tetramethoxy-2H-phthalazine-2-yl)-acetyl] -hydrazide (VII) in 60% yield. The formation of (VII) was confirmed by microanalytical and the IR spectrum which revealed the appearance of two bands at 1675, 1741 cm⁻¹ due to the C=O of amide and acetoxy C=O groups, respectively.

Cyclocondensation of the acid hydrazides (IV) with ethyl acetoacetate in absolute ethanol(14) afforded 5,6,7,8-tetramethoxy-4-(3,4-dimethylphenyl)-2-[2-(5-methyl-3-oxo-2,3- dihydro-pyrazol-1-yl]- 2-oxo- ethyl] -2H- phthalazin-1-one (VIII). The IR spectrum of (VIII) showed stretching bands at 3327, 1722 and 1665 cm⁻¹ corresponding to OH and C=O groups, respectively. The ¹H NMR spectrum of compound (VIII) revealed the appearance of different singlet signals at δ 2.30, 2.34, 4.31and 11.40 ppm corresponding to CH₃, pyrazole, two Ar-CH₂, NCH₂CO- and hydroxyl proton, respectively. The EIMS spectrum revealed an [M-2]⁺ at m/z 702.

It is interesting to investigate the behavior of the hydrazide (IV) towards aromatic aldehydes\(^{15,16}\) to obtain corresponding arylidine (IX) which contain C=N to investigate its behavior towards aliphatic and aromatic mercaptans under Michael reaction conditions. Thus, treatment of compound (IV) with series of aldehydes such as anisaldehyde, furfural, p-chlorobenzaldehyde and piperonal, afforded [4-(3,4-dimethyl-phenyl)-5,6,7,8-tetabromo-1-oxo-2H-phthalazine-2-yl]-acetic acid [(1-aryl) methylidene] hydrazide derivatives (IXa-d). The IR spectrum of (IXa) (Ar = C\(_6\)H\(_4\)-OCH\(_3\)) showed stretching bands at 3303 and 1704 cm\(^{-1}\).

corresponding to NH and C=O groups, respectively. The $^1$H NMR spectrum of IXc (Ar =C$_6$H$_5$-Cl) revealed the appearance of singlet signal at 6.46 ppm due to the olefinic proton of the methine group N=CH-Ar. The EIMS spectrum of (IXc) showed the two isotopic molecular ion peak at m/z 760,762 together with the fragmentation pattern complying with the structure assigned for the product.

The behavior of activated double bond in the hydrazone (IXa) towards sulphur nucleophiles has been studied$^{17}$, in the present investigation when hydrazone (IXa) was allowed to react with thiophenol in the presence of a few drops of piperidine, the product (X) was formed. The IR spectrum of (X) exhibited stretching bands at 3170, 1722 and 1673 cm$^{-1}$ attributed to NH group and two C=O groups, respectively.

On the other hand, when the hydrazone (IXa) was allowed to react with thioglycolic acid, addition to C=N takes place first, followed by cyclization and the thiazole nucleus attached to the side chain of the phthalazine derivative (XI) was afforded. The IR spectrum of XI showed the presence of $\nu$ C=O of cyclic amide at 1680, 1647, $\nu$ NH at 3184 and $\nu$ OH at 3363 cm$^{-1}$. Such IR data illustrate that phthalazine (XI) is present into three tautomeric forms a, b and c as follows:

(a) \[ \begin{array}{c}
\text{Br} & \text{Br}
\end{array} \]
(b) \[ \begin{array}{c}
\text{NCH}_2\text{CONHN}
\end{array} \]
(c) \[ \begin{array}{c}
\text{NCH}_2\text{CONHN}
\end{array} \]

The tautomers (a) and (b) are stabilized via hydrogen bonding, while the tautomer (c) is more stable than (a) and (b) due to keto form which is more stable than enol form.\(^{(18,19)}\).

Furthermore, the author and others investigated the behavior of compound (IX) towards cycloaddition reactions\(^{(17)}\), thus chloroacetyl chloride cycloadded to the Schiff base (IX) in dry dioxane in the presence of tri ethyl amine as a catalyst to afford N-(3-chloro-2-(4-methoxyphenyl)-4-oxoazetidin-1-yl)-2-(5, 6, 7, 8-tetrahydro-4-(3, 4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl) acetamide (XII). The IR spectrum displayed strong absorption bands at 3183 cm\(^{-1}\) (NH), bands at 1701 and 1687 cm\(^{-1}\) equivalent to (C=O) groups of cyclic amide and lactam ring, respectively.

Compound (IV) could be converted into dithiocarbamate (XIII) when it stirred with a mixture of carbon disulfide and ammonium hydroxide at room temperature. The IR spectrum showed strong absorption bands at 3423 cm\(^{-1}\) and 1267 cm\(^{-1}\) due to NH, C=S groups, respectively. EIMS spectrum show (M\(^{+}\)) at m/z 729.

---

\(\text{Synthesis, Reactions and Antimicrobial Activity on Some Novel Phthalazinone ...649}\)

---

*Egypt. J. Chem. 53, No.5 (2010)*
Conducting our interest in developing program for studying the behavior of dithiocarbamate compound (XIII) towards alkylating agents such as methyl iodide in order to prepare monomethyl (XIV) and dimethyl derivatives (XV).

Attempts were effort to cyclize the monomethyl compound (XIV) by refluxing with anthranilic acid afforded \( N\text{-}(4\text{-oxo-2-thioxo-1,2-dihydro quinazolin-3(4H)-yl})\text{-2-}(5,6,7,8\text{-tetrabromo-4-}(3,4\text{-dimethylphenyl})\text{-1-oxophthalazin-2(1H)-yl}) \) acetamide (XVI). When the foregoing reaction was applied using potassium salt of anthranilic acid and dimethyl derivative (XV), \( N'\text{-}(4\text{-oxo-1H-benzo[d][1.3]}\text{oxazin-2(4H)-ylidene})\text{-2-(5,6,7,8-tetrabromo-4-}(3,4\text{-dimethylphenyl})\text{-1 oxophthalazin -2(1H)-yl}) \) aceto hydrazide (XVII) was obtained.

The reaction of compound (XIII) with sodium chloroacetate in aqueous medium followed by acidification with concentrated hydrochloric acid afforded \( N\text{-}(4\text{-oxo-2-thioxothiazolidin-3-yl})\text{-2-(5,6,7,8-tetrabromo-4-}(3,4\text{-dimethyl-phenyl})\text{-1-oxophthalazin-2(1H)-yl}) \) acetamide (XVIII). The IR spectrum showed strong absorption bands at 3323 cm\(^{-1}\) due to NH of hydrazine group, at 2857 & 2925 cm\(^{-1}\) due to CH aliphatic, at 1714 cm\(^{-1}\) attributable to C=O and at 1255 cm\(^{-1}\) characteristic for C=S group.

**Antimicrobial activity**

The antimicrobial activity of some of the synthesized compounds was determined *in vitro* against a variety of bacteria. The tests were carried out using disc diffusion method\(^{20}\). The compounds were dissolved in DMF, and activity mentioned on 1000ppm. Agar plates were surface inoculated uniformly from fresh broth culture of the gram +ve and gram –ve bacteria.

The discs were incubated at 5°C for 1 hr to permit good diffusion then incubated at 28°C for 24 hr, and the zones of inhibition were measured.

The data obtained in Table 1 indicate that the starting compound (IV) is biologically inactive against gram +ve and gram –ve bacteria. The activity of thiazolidinone (XI) is higher than the activity of the rest of the prepared compounds while Schiff base (IXa) showed no activity against gram +ve bacteria and exhibit only weak activity with *Escherichia coli*. The \( \beta \)-lactam derivative (XII) has weak activity against Gram +ve bacteria while showing moderate activity against gram -ve bacteria.
Synthesis, Reactions and Antimicrobial Activity on Some Novel Phthalazinone

*Egypt. J. Chem. 53, No.5 (2010)*
It is quite clear from Table 2 that, the activity of the prepared compounds (XIII, XVI, XVII and XVIII) against gram +ve and gram –ve bacteria, can be arranged as follow:

- Using *Streptococci* and *Escherichia coli* all the compounds showed no activity.
- Using *Bacillus subtilis*, the compounds (XIII) and (XVI) exhibit strong activity, the decrease in potency is noticed as we pass from rodanone ring (XVIII to XVII).
- Using *Klebsiella pneumonia*, all the compounds are inactive except (XIII and XVI) that showed weak activity.

**Conclusion**

The screening results revealed that compounds IV, IXa, XI, XII, XIII, XVI, XVII, XVIII have significantly antimicrobial activity, however compound XI is higher biologically active against gram +ve and gram –ve bacteria, while compounds XIII, XVI exhibit strong activity against *Bacillus subtilis* and compounds XII, XVIII showed moderate to considerate antibacterial activity against the most employed organisms, but the data indicate that compounds IV, IXa, XVII are biologically inactive against gram +ve and gram –ve.

**Experimental**

All melting points are uncorrected. Elemental analyses were carried out in the Micro analytical Center, Cairo University. IR spectra (KBr) were recorded on a Bruker FTIR spectrophotometer and $^1$H-NMR spectra were recorded in (DMSO - $d_6$ and CDCl$_3$) on Varian Gemini spectrophotometer at 200 MHz and Varian Mercury spectrophotometer at 300 MHz, using tetra methyl silan (TMS) as an internal reference. EIMS were performed at 70 ev with Shimadzu GCMS (QP1000 EX).

4-(3, 4-Dimethyl-phenyl)-5, 6, 7, 8-tetra- bromo-2H-phthalazin-1-one (II)

A mixture of I (3.4g; 0.006mol) and hydrazine hydrate 98% (2.7 ml; 0.036 mol) in ethanol (50 ml) was refluxed for 3 hr. The reaction mixture was allowed to cool and the separated product was filtered and dried. Crystallization of the crude product from dioxane, afforded (II). Yield 62 %, m.p.272 °C, Anal. Calcd. for C_{16}H_{10}Br_{4}N_{2}O, Calculated : C 33.96 , H 1.78 , Br 56.48 , N 4.95 , Found: C 33.91 , H 1.75 , Br 56.42 , N 4.91. IR(KBr)cm\(^{-1}\), 3309 (NH), 3061 (CH, aromatic), 2916 (CH, aliphatic) and 1706 (C=O). \(^1\)H-NMR (200MHz, DMSO-d\(_6\)) \(\delta\) ppm. 2.34 (s,6H,2Ar-H), 7.45 (d,CH), 7.57(s,CH), 7.67(d,CH) and 7.2 (s, 1H, NH). Mass : m/z = M\(^+\) 566 (81.3%), M\(^+\)-H 565(100 %), 551, 537, 511, 496.

4-(3, 4-Dimethyl-phenyl)-5, 6, 7, 8-tetra- bromo-1-oxo-1H-phthalazin-2-yl]-acetyl chloride (III)

A mixture of phthalazine (II) (1g), chloroacetyl chloride (5 ml) was refluxed for 2 hr on steam bath. The reaction mixture poured into water, and then the mixture was allowed to stand at room temperature overnight. The collected solid was filtered, washed well with water and dried. Crystallization from Pet.-ether (80-100) afforded (III). Yield 98 %, m.p.240°C, Anal. Calcd. for C\(_{36}\)H\(_{26}\)Br\(_4\)Cl\(_2\)N\(_2\)O\(_2\), Calculated : C 33.66, H 1.73, Br 49.76, N 4.36, Cl 5.52, Found : C 33.61, H 1.70, Br 49.72, N 4.33, Cl 5.49. IR(KBr)cm\(^{-1}\), 1751 & 1685 (2C=O). \(^1\)H-NMR (200MHz, DMSO-d\(_6\)) \(\delta\) 2.34 (s,6H,2Ar-H), 4.75(s,2H,CH), 7.45(d,CH), 7.57, (s, CH), and 7.67(d, CH).

4-(3, 4-Dimethyl-phenyl)-5, 6, 7, 8-tetra- bromo-1-oxo-1H-phthalazin-2-yl]-acetyl acid hydrazide (IV)

A mixture of the acid chloride (III) (6.4, 0.01mol.) and hydrazine hydrate (0.015 mol, 0.75ml) in ethanol (50 ml) was refluxed for 10 hr. The reaction mixture was allowed to cool and the separated product was filtered and dried. Crystallization of the crude product with benzene, afforded (IV). Yield 69 %, m.p.220°C, Anal. Calcd. for C\(_{46}\)H\(_{30}\)Br\(_4\)N\(_2\)O\(_2\), Calculated : C 33.89, H 2.21, Br 50.10, N 8.78, Found : C 33.83, H 2.30, Br 49.81, N 8.72. IR(KBr)cm\(^{-1}\), 3263, 3312(NH and NH\(_2\)), 3021(CH, aromatic), 2916 (CH, aliphatic) and 1705 (C=O). \(^1\)H-NMR (200MHz, DMSO-d\(_6\)) \(\delta\) 2.40 (s, 6H, 2ArCH\(_3\)), 4.09 (s, 2H, CH\(_2\)), 4.22 (2H, CH\(_2\)), 7.45(d,CH), 7.57(s,CH), 7.67(d, CH) and 9.08 (1H,NH). Mass : m/z = (M-Br) 553(100%), 133, 105 and 77 (48%).

N'-phenyl amino carboxyl [4-(3, 4-Dimethyl-phenyl)-5, 6, 7, 8-tetra- bromo-1-oxo-1H-phthalazin-2-yl]-acetyl acid hydrazide (V)

A mixture of the hydrazide (IV) (6.39, 0.01mol) and phenylisocyanate (0.04 mol, 4.3 ml) in dry benzene (50 ml) was refluxed for 10 hr on steam bath. The excess solvent was evaporated and the reaction mixture was crystallized from methanol, afforded (V). Yield 71%, m.p.170°C, Anal. Calcd. for C\(_{42}\)H\(_{28}\)Br\(_4\)N\(_2\)O\(_2\), Calculated : C 39.66 , H 2.53 , Br 42.22 , N 9.25. Found : C 39.62 , H 2.50 , Br 42.19 , N 9.22. IR(KBr) cm\(^{-1}\), 3289 (NH) and 1644 and 1711(2 C=O). \(^1\)H-NMR (200MHz, DMSO-d\(_6\)) \(\delta\) 2.34 (s, 6H, two Ar-CH\(_3\)), 4.09.

(s,2H,CH2), 6.0 (s,1H,NHNHCO), 7.45-7.67 (m,8H, aromatic protons), 9.26 (s,1H,CONHCH3) and 10.08 (s,1H,CH2CONH).

4-(3-4-Dimethylphenyl)-5,6,7,8-tetrabromo-1-oxo-1H-phthalazin-2-yl)-acetic acid [1-methyl-3-oxo-butyldiene]-hydrazide (VI)

A mixture of the acetic acid hydrazide (IV) (1.9 g, 0.003mol.) and acetyl acetone (2ml) was refluxed in ethanol (20ml) for 12 h. After cooling, the collected solid crystallized from the proper solvent (20 ml) for 12 h. The fused mixture was poured into water; the solid obtained was washed with water several times and crystallized from petroleum ether/ethanol. Yield 60 %, m.p.190 °C. Anal. Calcd. for C32H30Br2N6O4. Calculated: C 38.37, H 2.80, Br 44.39, N 7.78. Found: C 38.28, H 2.81, Br 44.08, N 7.71.

Acetic acid N'-acetyl-2-(5,6,7,8-tetrabromo-4-(3,4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl)acetohydrazonic anhydride (VII)

A mixture of the hydrazide (IV) (1.9g; 0.003mol) and acetyl anhydride (10ml) was refluxed for 7 hr. After cooling, the reaction mixture was poured into ethanol and filtered. The crude product was crystallized from toluene. Yield 60 %, m.p.190 °C. Anal. Calcd. for C32H30Br2N6O4. Calculated: C 38.37, H 2.80, Br 44.39, N 7.78. Found: C 38.28, H 2.81, Br 44.08, N 7.71.

5,6,7,8-Tetrabromo-4-(3, 4-dimethylphenyl)-2-(2- (5-hydroxy- 3-methyl-1H-pyrazol-1-yl)-2-oxoethyl)phthalazin-1(2H)-one (VIII)

A mixture of the acetic acid hydrazide (IV) (0.6g; 0.001mol), ethyl acetoacetate (0.126 ml; 0.001mol) was refluxed in ethanol (20ml) for 12 hr. On cooling, the separated solid was filtered off and crystallized from dioxane. Yield 84 %, m.p.288 °C. Anal. Calcd. for C32H30Br2N6O4. Calculated: C 37.53, H 2.29, Br 45.40, N 7.96. Found: C 37.48, H 2.23, Br 45.34, N 7.91. IR(KBr)cm⁻¹ 1327 (NH), 1722, 1704 and 1669 (3C=O). ¹HNMR (200MHz, DMSO-d₆, δ) 1.49 (s,3H, O=C=O), 7.45, 4.31 (s,2H, CH2), 6.18 (s,1H, CH), 7.45 (d,CH), 7.57 (s,CH), 7.67 (d,CH) and 10.58 (s,1H,NH).

4-(3, 4-Dimethylphenyl)-5,6,7,8-tetrabromo-1-oxo-2H-phthalazin-2-yl]-acetic acid [(1-arylmethylidene]-hydrazide (IXa-d)

A mixture of the acetic acid hydrazide (IV) (6.34; 0.01mol), the appropriate aromatic aldehyde, namely, anisaldehyde, furfural, 4-chloro-benzoaldehyde and piperalone (0.01 mol.) and few drops of piperidine was refluxed in boiling ethanol (20 ml) for 12 hr. After cooling, the collected solid crystallized from the proper solvent.

IXa: Crystallization from dioxane, Yield 71\%, m.p.170 °C, Anal. Calcd. for C$_2$H$_9$Br$_3$N$_2$O$_3$. Calculated: C 41.30, H 2.67, Br 42.27, N 7.41. Found: C 41.23, H 2.66, Br 41.98, N 7.36. IR (KBr) cm$^{-1}$ 3303 (NH) and 1704 (C=O). $^1$HNMR (400 MHz, DMSO-d$_6$) $\delta$ 2.34 (s, 6H, two Ar-CH$_3$), 3.83 (s, 3H, OCH$_3$), 4.14 (s, 2H, NCH$_2$CO), 7.06-7.84 (m, 7H, aromatic protons), 8.51 (s, 1H, N=CH-Ar) and 10.8 (s, NH, NH) 

IXb: Crystallization from ethanol, Yield 79\%, m.p.280 °C, Anal. Calcd. for C$_2$H$_9$Br$_3$N$_2$O$_3$. Calculated: C 38.58, H 2.25, Br 44.64, N 7.82. Found: C 38.41, H 2.22, Br 44.59, N 7.80. IR (KBr) cm$^{-1}$ 3133 (NH) and 1696 (C=O). Mass m/z=M$^+$704 (4.02\%) and 583 (100\%).

IXc: Crystallization from ethanol, Yield 85\%, m.p.194 °C, Anal. Calcd. for C$_2$H$_9$Br$_3$CIN$_2$O$_2$. Calculated: C 39.48, H 2.25, Br 42.03, N 7.37, Cl 4.66. Found: C 39.34, H 2.22, Br 41.90, N 7.32, Cl 4.62. IR (KBr) cm$^{-1}$ 3207 (NH) and 1659 (C=O). $^1$HNMR (400 MHz, DMSO-d$_6$) $\delta$ 2.34 (s, 6H, two Ar-CH$_3$), 4.14 (s, 2H, NCH$_2$CO), 7.45-7.90 (m, 7H, aromatic protons), 8.46 (s, 1H, N=CH-Ar) and 10.5 (s, NH, NH). Mass m/z=M$^+$760 (3.2\%) and 583 (100\%).

IXd: Crystallization from ethanol, Yield 82\%, m.p.198 °C, Anal. Calcd. for C$_2$H$_9$Br$_3$N$_2$O$_4$. Calculated: C 40.55, H 2.36, Br 41.51, N 7.28. Found: C 40.40, H 2.25, Br 41.35, N 7.12. IR (KBr) cm$^{-1}$ 3190 (NH) and 1650 (C=O). $^1$HNMR (200 MHz, DMSO-d$_6$) $\delta$ 2.34 (s, 6H, two Ar-CH$_3$), 4.09 (s, 2H, NCH$_2$CO), 7.45-7.77 (m, 6H, aromatic protons), 8.54 (s, 1H, N=CH-Ar) and 11.07 (s, NH, NH).

$N'$-(4-Methoxybenzyl)-$N'$-(phenylthio)-2-(5,6,7,8-tetra bromo-4-(3,4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl)acetohydrazide (X)

A mixture of the benzylidene derivative (IXa) (0.75 g; 0.001 mol), thiophenol (0.165 g; 0.0015 mol) and anhydrous aluminum chloride (0.5 g) was refluxed in dry DMF (20 ml) and three drops of piperidine for 20 hr. The reaction mixture was then poured into water and the precipitated solid was filtered. The residue was washed with water then with hot ethanol. The crude product was crystallized from dioxane. Yield 43\%, m.p.300°C. Anal. Calcd. For C$_2$H$_9$Br$_3$N$_2$O$_5$. Calculated: C 44.72, H 3.03, Br 36.90, N 6.47, S 3.70. Found: C 44.59, H 3.18, Br 37.06, N 6.28, S 3.73. IR (KBr) cm$^{-1}$ 3170 (NH), 1673 and 1722 (C=O). $^1$HNMR (200 MHz, DMSO-d$_6$) $\delta$ 2.0 (s, 1H, NH amine), 2.34 (s, 6H, two Ar-CH$_3$), 3.83 (s, 3H, O-CH$_3$), 4.09 (s, 2H, NCH$_2$CO), 4.95 (s, 1H, N=CH-Ar) and 11.07 (s, NH, NH).

[4-(3, 4-Dimethyl-phenyl) -5, 6, 7, 8-tetrabromo-1-oxo -IH-phthalazin - 2-yl]-N-(4-oxo-2anisyl- thiazolidin -3- yl)-acetamide (XI)

A mixture of (IXa) (0.75 g; 0.001 mol), thioglycolic acid (0.165 g; 0.0015 mol), and anhydrous aluminum chloride (0.5 g) was refluxed in dry DMF (20 ml) and three drops of piperidine for 20 hr under a calcium chloride guard tube. The reaction mixture was then poured into water and the precipitated solid was filtered.

The residue was washed with water then with hot ethanol. The crude product was crystallized from Pet.-ether (80-100). Yield 65 %, m.p.213 °C, Anal. Calcd. for C₂H₂Br₆N₂O₂S, Calculated : C 40.51, H 2.67, Br 38.50, N 6.75, S 3.86, Found : C 40.50, H 2.60, Br 38.55, N 6.81, S 3.81, IR (KB)cm⁻¹ 3263 (NH), 3004 (CH aromatic), 2918 & 2854 (CH aliphatic), and 1680 (C=O).¹¹HNMR (200MHz, DMSO-d₆, δ) 2.34 (s, 6H, two Ar-CH₃), 3.38 (s,3H,CH₂), 3.95 (s, 2H, CO-CH₂-S), 4.09 (s, 2H, NCH₂CO), 5.92 (s, 1H, CH-S),5.59 (s,1H, N-CH=Ar), 7.26-7.67 (m, 8H, aromatic protons) and 8 (s, 1H, NH).

N-(3-chloro-2-(4-methoxyphenyl)-4-oxoazetidin-1-yl)-2-(5, 6, 7, 8-tetramethyl-4-(3, 4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl) acetyl) hydrazine carbodithioate (XII)

A mixture of the benzylidene derivative (IXa) (1.5 g; 0.002mol), triethylamine (0.84 ml; 0.006mol) was dissolved in dry benzene or dry dioxane. Add chloroacetyl chloride (0.64 ml; 0.008mol) drop wisely to the reaction mixture with stirring through 1/2 hr. complete stirring for 3 hr. The precipitated solid was filtered, washed with dry benzene or dioxane. Concentrate the filtrate then pour with stirring through 1/2 hr. complete stirring for 3 hr. The precipitated solid was filtered, washed with water then with hot ethanol. The crude product was crystallized from Pet.-ether (80-100). Yield 65 %, m.p.142 °C, Anal. Calcd. for C₂H₂Br₂,S,O₄, Calculated : C 40.39, H 2.54, Br 38.34, N 6.71, Cl 4.21, IR(KBr)cm⁻¹ 3180 (NH), 1701 and1687 (C=O).¹¹HNMR (200MHz, DMSO-d₆, δ) 2.34 (s, 6H, two Ar-CH₃), 3.38 (s,3H,CH₂), 4.13 (s,2H, NCH₂CO), 5.0 (d, 1H,CH=Ar propiolactam), 5.45 (d, 1H,CH-Cl propiolactam), 6.34-7.67 (m,7H, aromatic protons) and 8 (s, 1H, NH). Mass: m/z = M⁺832 (1%) and 77 (100%).

Ammonium 2-(2-(5, 6,7,8-tetramethyl-4-(3, 4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl) acetyl) hydrazinecarbodithioate (XIII)

To a solution of the hydrazide compound (IV) (0.01 mole, 6.34 g), in ammonium hydroxide (40 ml), 2 ml of carbon disulfide was added dropwise; and left overnight, the solid product formed was filtered off and crystallized from Pet.-ether (80-100) to give (XIII). Yield 52 %, m.p.196°C, Anal. Calcd. for C₂H₂Br₆N₂O₂S, Calculated : C 31.03, H 2.30, Br 41.29, N 10.86, S 8.28, Found : C 31.10, H 2.31, Br 41.50, N 10.52, S 8.60, IR(KBr)cm⁻¹ 3423 (NH), 3080 (CH, aromatic), 2915 (CH, aliphatic), 1708, 1688 (2 C=O) and 1267 (C=S).¹¹HNMR (200MHz, DMSO-d₆, δ) 2.34 (s, 6H, two Ar-CH₃), 4.15 (s,2H, NCH₂CO), 7.45 (d,CH), 7.57 (s, CH), 7.67 (d, CH) and 10.08 (1H, NH Sec. amide). Mass: m/z = (M⁺) 729 (1.6%) and (M⁺ - S) (1.4%).

Methyl 2-(2-(5, 6,7,8-tetramethyl-4-(3,4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl) acetyl) hydrazine carbodithioate (XIV)

To a solution of dithiocarbamate compound (XIII) (7.27 g, 0.01 mol), in DMF (30 ml), (0.93 ml, 0.015 mol) of methyl iodide was added, the reaction mixture was refluxed for 7 hr. Then cooled reaction and poured into ice - cold water, then the separated solid was filtered off, washed well with water and dried. crystallization from dioxane, afforded (XIV). Yield 90 %, m.p.298 °C, Anal. Calcd. for C₂H₁₀Br₆N₂O₂S₂, Calculated : C 32.99, H 2.21, Br 43.90, N 7.69, S 8.81, Found : C 32.96, H 2.20, Br 43.93, N 7.66, S 8.79, IR(KBr)cm⁻¹

...Synthesis, Reactions and Antimicrobial Activity on Some Novel Phthalazine ...657

3291 (NH), 3080 (CH, aromatic), 2920 & 2949 (CH, aliphatic), 1709 (C=O) and 1258 (C=S). 1H NMR (200 MHz, DMSO-d6) δ 2.01 (1H, NH amine), 2.34 (s, 6H, 2ArCH3), 2.55 (s, 3H, S-CH3), 4.10 (s, 2H, CH2), 7.45 (d, CH), 7.57 (s, CH), 7.67 (d, CH) and 10.0 (1H, NH Sec. amide).

**Dimethyl 2-[(5,6,7,8-tetrabromo-4-(3, 4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl)acetylcarnobonoylhydroxazinodithioate (XV)**

To a solution of dithiocarbamate compound (XIII) (7.27 g, 0.01 mol), in DMF (30 ml), (1.9 ml, 0.03 mol) of methyl iodide was added, the reaction mixture was refluxed for 7 h. Then cooled reaction and poured into ice-water, the separated solid was filtered off, washed well with water and dried. Crystallization from dioxane, afforded (XV). Yield 83 %, m.p. 347 °C, Anal. Calcd. for C32H24Br5N5O4S2: C 33.99, H 2.40, Br 4.30, N 7.55, S 8.64, Found: C 33.96, H 2.34, Br 43.03, N 7.56, S 8.69. IR(KBr) cm⁻¹ 3214 (NH), 3056 (CH, aromatic), 2924 & 2943 (CH, aliphatic) and 1675 (C=O).

**N-(4-Oxo-2-thioxo-1, 2-dihydroquinazolin-3-(4H)-yl)-2-(5,6,7,8-tetrabromo-4-(3,4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl)acetamide (XVI)**

A mixture of monomethyl compound (XIV) (7.42 g, 0.01 mol), in DMF (30 ml) and (1.37 g, 0.01 mol) of methyl iodide was refluxed for 6 h. Then cool, concentrate, the separated solid was filtered off, washed well with water and dried. Crystallization from the ethanol, afforded (XVI). Yield 47 %, m.p. 244 °C, Anal. Calcd. For C32H24Br5N5O4S2: C 33.99, H 2.40, Br 4.00, N 7.87, S 4.04, IR(KBr)cm⁻¹ 3210 (NH), 3023 & 3056, 2924 & 2943 (CH, aliphatic) and 1675 (C=O). 1H NMR (200 MHz, DMSO-d6) δ 2.34 (s, 6H, 2ArCH3), 4.0 (1H, C-NH aromatic), 4.9 (s, 2H, CH2), 6.99-7.67 (m, 7H, aromatic protons) and 10.0 (1H, NH Sec. amide).

**N-(4-oxo-1H-benzo[d][1,3]oxazin-2(4H)-ylidene)-2-(5,6,7,8-tetrabromo-4-(3,4-dimethylphenyl)-1-oxophthalazin-2(1H)-yl)acetohydrazide (XVII)**

A mixture of dimethyl compound (XV) (7.56 g, 0.01 mol), in DMF (30 ml) and (1.37 g, 0.01 mol) of anthranilic acid. Then 0.01 mole of potassium hydroxide in 2 ml water was added to the reaction mixture. Reflux for 5 h, then cool, concentrate, the separated solid was filtered off, washed well with water and dried. Crystallization from acetic acid afforded (XVII). Yield 56 %, m.p. 330 °C, Anal. Calcd. for C32H24Br5N5O4: C 39.88, H 2.19, Br 40.82, N 8.94, Found: C 39.84, H 2.15, Br 40.80, N 8.90, 3330 & 3252 (NH), 3057 (CH, aromatic), 2929 (CH, aliphatic) and 1658 (C=O).

**N-(4-oxo-2-thioxothiazolidin-3-yl)-2-(5,6,7,8-tetrabromo-4-(3,4-dimethyl phenyl)-1-oxophthalazin-2(1H)-yl)acetamide (XVIII)**

To an aqueous solution of sodium chloroacetate (0.01 mol, 7.27 g, 0.01 mol) dithiocarbamate compound (XIII) was added portion wise during 10 min with stirring. The stirring was continued at room temperature for 3 h. Then a hot solution of concentrated hydrochloric acid (66 ml) and water (26 ml) was added.

On cooling a precipitate was formed which was filtered off and crystallized from ethanol, afforded (XVIII). Yield 42%, m.p.199°C, Anal. Calcd. for C_{6}H_{10}Br_{2}N_{2}O_{5}S_{2} , Calculated : C 33.45 , H 1.87, Br 42.38, N 7.43 , S 8.50 , Found : C 33.22, H 1.74, Br 42.02, N 7.30 , S 8.77 . IR(KBr)cm^{-1} 3323 (NH), 3080 (CH, aromatic), 2857 & 2925 (CH, aliphatic), 1714 (C=O) and 1255 (C=S). 1HNMR (200MHz, DMSO-d_6) δ 2.34 (s, 6H, 2ArCH_3), 4.11 (s, 2H, SCH_2), 4.3 (s, 2H, CH_2), 7.45-7.67 (m, 3H. aromatic protons) and 10.9 (1H,NH Sec. amide).

تشديد وتفاعلات بعض مستويات الفيتوالانيلينات الجديدة ودراسة نشاطها البيولوجي

فتحية ك. محمد

في هذا البحث تم تحضير مركب الفيتوالانيلين (II) من تفاعل حمض الباروك بترود (I) مع هيدرات الهيدروزین مع إعداد كلرو واسيليت كلونيل وإ uppى على مركب (III) مع الهيدرازين. ومعالجة مركب (III) مع إعداد كلرو واسيليت كلونيل بإ تفاعل مع الكارافات التالية (الفينيل أيزوسينات – الاسبيتي أسيتون – إضافة حمض الخليك) واعطي المركبات (IV) على الترتيب.

وبالتاليف الحقيقى لمركبات (IV) مع إستراتواستات الإيثيل أعطي مركب (VIII) ودراسة سلوك مركبة (IV) تجاه الإصدادات الاروماتية مثل بنزالدېد. (IXa-d). ودراسة سلوك مركبات (IXa) تجاه المركباتان الألفاناتية والأريماتية وإحادى كلرووصف الكربونيد اعتىي مركبات (XII, XI, X) على الترتيب تحت تحويل مركب إضافة هيكربيوميت بتفاعل مع ثنائي كربونيد الكروي واعطي مركب (IV) الذي تم الكالة باستخدام مدد الميثيل 2 مول اعتىي مشتقات إحادى وثنائي ميثيل (IV). (XIV).

ويتم محافظة حولكة لمركبات (XIV) مع حمض البلازابليك اعتىي مشتق الفيتوالانيلين (XVI) وايضًا باستخدام الملح البنوباسيمي للنابنيتينك مع ثنائي الميثيل (XV) اعتىي (XVII).

ويتفاعل مركب (XIII) مع إعداد كلرووصفات الصوديوم اعتىي مركب (XVIII).

وتم الابال المركبات المحضرة بتحليل العنصرى وكذلك الدراسات الطيفية المختلفة (IR, H-NMR, Mass spectrosopy).

وأتى في دراسة النشاط البكتيرى للمركبات المحضرة ووجد أن معظمهم له تأثير على تجان البكتيريا الموجبة والسالبة الجرام وبعضها له تأثير تجان البكتيريا الموجبة الجرام فقط.
