5-Phenyl-2-furaldehyde: Synthesis, Reactions and Biological Activities

A.S. Hassan*, Souad A. Osman and Taghrid S. Hafez
Department of Organometallic and Organometalloid Chemistry, National Research Centre, El-Buhosh St., Dokki, Giza, Egypt.

5-Phenyl-2-furaldehyde is a good starting material for designing of polyfunctionalized heterocyclic compounds with pharmacological interest such as antimicrobial and antitumor activities. This review article focused on some synthetic methods, reactions and biological activities of 5-phenyl-2-furaldehyde.

Keywords: 5-Phenyl-2-furaldehyde, Synthesis, Palladium-catalyzed, Chemical reactions and Biological activities.

Compounds bearing oxygen heterocycles are well known to be biologically important. On the other side, compounds containing furan moiety show a diverse array of favorable pharmacological properties and have consequently been used as medicines in a variety of different diseases areas. Furan derivatives obtained from natural and synthetic sources have been a subject of considerable interest for their wide range of pharmaceutical applications. A large number of naturally occurring compounds bearing furan have shown interesting biological activities such as antimicrobial, cytotoxic and antitumor properties, as well as of other potentially useful activities.

Literature survey, as far as we are aware, revealed that some drugs bearing furan moiety are considered as the most active in manufactured drugs such as Dantrolene (Muscle relaxant), Furosemide (Antihypertensive), Nifurtimox (Antiprotozoal), Nifuroxazide (Antibiotic), Nifurprazine (Antibacterial), Furfenorex (Anorexic), Dormovit (Sedative, hypnotic) and Methafurylene (Antihistaminic). The structures of these drugs are shown in Fig. 1.

5-Phenyl-2-furaldehyde (Fig. 2) and its derivatives have been reported for their interesting pharmacological activities e.g. antibacterial, antitumor, inhibitors of phosphoinositide 3-Kinase, HCV NS5B polymerase and non-thiol farnesyltransferase.

Therefore, the objective of the present work is to shed more light on the synthesis, reactions and biological activities of 5-phenyl-2-furaldehyde.

**Synthetic Methods**

5-Phenyl-2-furaldehyde can be synthesized via the following reactions:

*The coupling reaction with copper(II)-catalyzed (Meerwein arylation)*

5-Phenyl-2-furaldehyde 3 was prepared by coupling benzene diazonium chloride 1 with 2-furaldehyde 2 in the presence of cupric chloride (Scheme 1) \(^{17,18}\).

\[
\begin{align*}
\text{CuCl}_2/\text{acetone} & \quad 1 \quad 2 \quad 3 \\
\text{CHO} & \quad \text{CHO} & \quad \text{CHO}
\end{align*}
\]

*Fig. 1. The structures of some drugs bearing furan moiety.*

*Fig. 2. The structure of 5-phenyl-2-furaldehyde 3.*

*Egypt. J. Chem. 58, No. 2 (2015)*
**Vilsmeier-Haack reaction**

5-Phenyl-2-furaldehyde (3) (yield: 60%) was synthesized from 2-phenylfuran (4) via a Vilsmeier-Haack reaction (Scheme 2)\(^{(19)}\).

\[
\begin{array}{c}
\text{POCl}_3/\text{DMF} \\
\text{O} \\
\text{4} \\
\xrightarrow{\text{3}} \\
\text{Scheme 2}
\end{array}
\]

**Photochemical reaction**

Irradiation of 5-bromofuran-2-carbaldehyde (5) in benzene solution furnished 3 in yield 64\%\(^{(20)}\) but using 5-iodofuran-2-carbaldehyde (6) gave yield 91\% (Scheme 3)\(^{(21)}\).

\[
\begin{array}{c}
\text{Irradiation/ benzene} \\
\text{O} \\
\text{CHO} \\
\text{Br} \\
\text{5} \\
\xrightarrow{\text{3}} \\
\text{Irradiation/ benzene} \\
\text{O} \\
\text{CHO} \\
\text{I} \\
\text{6} \\
\text{Scheme 3}
\end{array}
\]

**Palladium(II) acetate catalyzed reaction**

Oxidation of 2-furaldehyde (2) by palladium(II) acetate in acetic acid containing benzene at reflux temperature gave 3 (Scheme 4)\(^{(22)}\).

\[
\begin{array}{c}
\text{[O]} / \text{Pd(OAc)}_2/ \text{AcOH} \\
\text{2} \\
\xrightarrow{\text{3}} \\
\text{benzene} \\
\text{Scheme 4}
\end{array}
\]

Moreover, the coupling of phenyl boronic acid with 5 in water, in the presence of tetrabutylammonium bromide and palladium(II) acetate at room temperature (RT) yielded 5-phenyl-2-furaldehyde 3 (yield: 74\%) (Scheme 5)\(^{(23)}\).

\[
\begin{array}{c}
\text{PhB(OH)}_2 \\
\text{Pd(OAc)}_2 / \text{H}_2\text{O} / \text{RT} \\
\text{tetrabutylammonium bromide} \\
\text{5} \\
\xrightarrow{\text{3}} \\
\text{Scheme 5}
\end{array}
\]
5% Pd(PPh₃)₂Cl₂ catalyzed
5-Phenyl-2-furaldehyde (3) was prepared from 5 and phenyl tributyl tin (7) in the presence of 5% Pd(PPh₃)₂Cl₂ in refluxing dichloroethane (yield: 61%) (Scheme 6) (24).

![Scheme 6](image)

Pd(dppf)Cl₂ [1,1’-Bis(diphenylphosphino) ferrocene] dichloropalladium catalyzed
5-Phenyl-2-furaldehyde 3 was prepared from bromobenzene (8) and organozinc reagents (9a-c) in the presence of Pd(dppf)Cl₂ as a catalyst (yields 9a: 77%, 9b: 76%, 9c: 71%) (Scheme 7) (25).

![Scheme 7](image)

Palladium catalyst
The cis,cis,cis,1,2,3,4-tetrakis (diphenylphosphinomethyl) cyclopentane/ [PdCl(C₃H₅)]₂ complex catalyzed the Suzuki cross-coupling of 5 with phenyl boronic acid in dry xylene under argon to afford 3 (Scheme 8) (26,27).

![Scheme 8](image)

Also, the Suzuki coupling of 5 with phenylboronic acid was catalyzed by trans-(Cy₂NH)₂Pd(OAc)₂(DAPCy) in EtOH under aerobic conditions to afford the coupled product 3 in yield 91% (Scheme 9) (28).

![Scheme 9](image)
Palladium-catalyzed Hiyama cross-coupling
5-Chlorofuran-2-carbaldehyde (10) was coupled with phenyltrifluorosilane (11) in the presence of Pd(OAc)$_2$ as a catalyst to afford the coupled product, 5-phenyl-2-furaldehyde (3) (yield: 74%) (Scheme 10)\(^{(29)}\).

\[
\begin{align*}
\text{Cl} & \quad \text{CHO} \\
\text{10} & \quad + \quad \text{SiF}_3 \\
\text{11} & \quad \text{Pd(OAc)}_2 \\
\text{Scheme 10}
\end{align*}
\]

Suzuki coupling reaction
5-Chlorofuran-2-carbaldehyde (10) can be arylated with phenylboronic acid in the presence of the PAP ligand \([2-(di-\text{tert-butylphosphino})-1\text{-phenyl}-1\text{H-pyrrole}]\) as a catalytic to form 3 (yield > 99%) (Scheme 11)\(^{(30)}\).

\[
\begin{align*}
\text{Cl} & \quad \text{CHO} \\
\text{10} & \quad + \quad \text{PhB(OH)}_2 \\
\text{Pd} & \quad / \quad \text{PAP ligand} \\
\text{Scheme 11}
\end{align*}
\]

PAP ligand = \(2-(di-\text{tert-butylphosphino})-1\text{-phenyl}-1\text{H-pyrrole}\)

Suzuki-Miyaura reaction
5-Phenyl-2-furaldehyde (3) can be prepared by reacting 5-bromo-2-furaldehyde (5) with phenylboronic acid in the presence of Pd(OAc)$_2$ and ligand 1 \([\text{glyoxal bis}(N\text{-methyl}-N\text{-phenyl-hydrazone})]\) as a catalyst under aerobic conditions (yield: 83%) (Scheme 12)\(^{(31)}\).

\[
\begin{align*}
\text{Br} & \quad \text{CHO} \\
\text{5} & \quad + \quad \text{PhB(OH)}_2 \\
\text{Pd(OAc)}_2/ \text{ligand 1} & \quad \text{Scheme 12}
\end{align*}
\]

Also, 5-phenyl-2-furaldehyde 3 can be prepared by reacting 5 with phenylboronic acid via Suzuki-Miyaura reaction in the continuous flow reactor with using the palladium resin catalyst, \(N,N\)-diisopropyl ethyl amine in DMF/water at 100 °C, (yield: 91%) (Scheme 13)\(^{(32)}\).

\[
\begin{align*}
\text{Br} & \quad \text{CHO} \\
\text{5} & \quad + \quad \text{PhB(OH)}_2 \\
\text{palladium resin catalyst} & \quad \text{Scheme 13}
\end{align*}
\]
Moreover, the Suzuki-Miyaura reaction of 6 and phenylboronic acid catalyzed with using the membrane-installed microchannel device furnished 3 in high yield (99%) (Scheme 14)\(^{(33)}\).

![Scheme 14](image)

\textit{The coupling reaction of Ph}_3\text{Bi with 5-bromo-2-furaldehyde}

The coupling reaction of 5 with Ph\(_3\)Bi furnished 5-phenyl-2-furaldehyde (3) in high yield (89%) with using Pd(OAc)\(_2\) as a catalyst and Cs\(_2\)CO\(_3\) base in N-methylpyrrolidone (NMP) solvent (Scheme 15)\(^{(34)}\).

![Scheme 15](image)

\textbf{Chemical Reactions}

\textit{Formation of furfurylidene derivatives}

The condensation of 3 and pentan-2,4-dion (12) in THF in the presence of Cu(II)Cl\(_2\) as a catalyst formed 3-[(5-phenylfuran-2-yl)methylene]pentane-2,4-dione 13 in moderate yield (Scheme 16)\(^{(35)}\).

![Scheme 16](image)

6-(5-Phenyl-2-furfurylidene)-dibenz[a,c]cyclohepten-5,7-dione (15) was prepared by the reaction of 6,6-dihydro-dibenz[a,c]cyclohepten-5,7-dione (14) with 3 in benzene and 96% ethanol (yield 70%) (Scheme 17)\(^{(36)}\).

![Scheme 17](image)

Methyl-2-cyano-3-(5-phenyl-2-furyl)acrylate (16a) (92%)\(^{37}\) or ethyl 2-cyano-3-(5-phenyl-2-furyl)acrylate 16b (72%)\(^{38}\) were prepared by the reaction of 3 with methyl cyanoacetate or ethyl cyanoacetate, respectively, via using the Knoevenagel reaction conditions, in dry ethanol with adding sodium ethoxide as a catalytic (Scheme 18).

![Scheme 18](image)

Reaction of 5-phenyl-2-furaldehyde 3 with cyanoselenoacetamide gave 2-cyano-3-(5-phenyl-2-furyl)prop-2-eneselenoamide (17) (yield: 83%) (Scheme 19)\(^{39,40}\).

![Scheme 19](image)

3-Amino-2-butanenitrile was first hydrolyzed by dilute HCl in ethanol to yield cyanoacetone, which, upon Knoevenagel condensation with 3 and then neutralization afforded 3-oxo-2-[(5-phenylfuran-2-yl)methylene]butanenitrile (18) in yield 91% (Scheme 20)\(^{41}\).

![Scheme 20](image)

Condensation of 5-phenyl-2-furaldehyde (3) with 5-nitrofurfuryl phenyl sulfone or 5-nitrofurfuryl trichloromethyl sulfone afforded 1-(5-nitro-2-furyl)-1-phenyl sulfonyl-2-(5-phenyl-2-furyl) ethylene (19a)\(^{42}\) r 1-(5-nitro-2-furyl)-1-trichloromethyl sulfonyl-2-(5-phenyl-2-furyl) ethylene (19b)\(^{43}\), respectively (Scheme 21).

*Egypt. J. Chem. 58, No. 2 (2015)*
1-Phenyl sulfonyl-1-cyano-2-(5-phenyl-2-furyl) ethylene (20) (yield: 68%) was prepared by the condensation of 3 with phenyl sulfonyl acetonitrile (Scheme 22)\(^{(44)}\).

3,4-Dichlorophenylacetonitrile treated with 5-phenyl-2-furaldehyde (3) in water with adding 40% PhCH\(_2\)NMe\(_3\)(OH) as a catalyst at 50 °C for 5 hr gave (Z)-2-(3,4-dichlorophenyl)-3- (5-phenyl-2-furyl) acrylonitrile (21) in yield 94% (Scheme 23)\(^{(13)}\).

2-Cyanomethylbenzimidazole reacted with 5-phenyl-2-furaldehyde (3) to afford a condensation product, 3-(5-phenyl-2-furyl)-2-(2- enzimidazolyl) acrylonitrile 22 in a high yield. The carboxylic acid chloride (23) was prepared from ethyl 2-cyano-3-(5-phenyl-2-furyl)acrylate (16b) which was in turn synthesized by condensation of 5-phenyl-2-furaldehyde (3) with ethyl cyanoacetate. Compound 23 and o-phenylenediamine when heated in DMF formed 22 (Scheme 24)\(^{(45)}\).

5-[(5-Phenyl-2-furyl)methylene]thiazolidine-2,4-dione (24) was prepared by the condensation of 5-phenyl-2-furaldehyde (3) with thiazolidine-2,4-dione in the presence of β-alanine in acetic acid (Scheme 25) \(^{(14)}\).

Rhodanine was condensed with 5-phenyl-2-furaldehyde (3) in the presence of piperidine in ethanol to afford \((Z)-5-((5\text{-phenylfuran-2-yl})\text{-methylene})-2\text{-thioxothiazolidin-4-one}\) (25), which then reacted with \(\text{CH}_3\text{I}\) to form the methyl thio-derivative (26) (Scheme 26) \(^{(46)}\).
(Z)-3-Methyl-2-(4-oxo-5-((5-phenylfuran-2-yl)methylene)-2-thioxothiazolidin-3-yl) pentanoic acid (27a)\(^{(47)}\), (Z)-2-(4-oxo-5-((5-phenylfuran-2-yl)methylene)-2-thioxothiazolidin-3-yl)-3-phenyl propanoic acid (27b)\(^{(47)}\) and (Z)-2-(4-oxo-5-((5-phenylfuran-2-yl)methylene)-2-thioxothiazolidin-3-yl) acetic acids (27c)\(^{(48)}\) were obtained \textit{via} the Knoevenagel condensation reaction of the 5-phenyl-2-furaldehyde (3) with the \textit{N}-substituted rhodanine, \textit{e.g.} (2S)-3-methyl-2-(4-oxo-2-thioxothiazolidin-3-yl) pentanoic acid, (S)-2-(4-oxo-2-thioxothiazolidin-3-yl)-3-phenyl propanoic acid and rhodanine-3-acetic acid, respectively (Scheme 27).

\[\text{Scheme 27}\]

5-Phenyl-2-furaldehyde (3) condensed with 4-methyl-\textit{N}-(2-oxo-2,5-dihydrothiazol-4-yl) benzenesulfonamide in \textit{n}-BuOH to form (Z)-4-methyl-\textit{N}{{{\{2-oxo-5-\[(5-phenylfuran-2-yl)methylene\]}\}-2,5-dihydrothiazol-4-yl} benzenesulfonamide (28) in yield 75\% (Scheme 28)\(^{(15)}\).

\[\text{Scheme 28}\]

3-(4-Methoxybenzyl)-2-(4-methoxybenzylimino)-5-((5-phenylfuran-2-yl)methylene) thiazolidin-4-one (29) (yield: 51\%) was synthesized by one-pot reaction of 4-methoxybenzylamine, 4-methoxybenzisothiocyanate with chloroacetyl chloride and 5-phenylfuran-2-carbaldehyde (3) (Scheme 29)\(^{(49)}\).

\[\text{Egypt. J. Chem. 58, No. 2 (2015)}\]
5-Phenyl-2-furaldehyde Synthesis, Reactions and Biological Activities

**Scheme 29**

**Chalcone derivatives**

1-(2-Furoyl)-2-(5-phenylfuran-2-yl)ethylene (30a)\(^{(50)}\), 1-benzoyl-2-(5-phenylfuran-2-yl)ethylene (30b)\(^{(50)}\) and 1-(5-nitro-2-furoyl)-2-(5-phenylfuran-2-yl)ethylene (30c)\(^{(51)}\) have been synthesized by the condensation of 5-phenyl-2-furaldehyde (3) with 2-acetylfuran, acetophenone and 5-nitro-2-acetylfuran, respectively (Scheme 30).

**Scheme 30**

Methyl 3-(5-phenylfuran-2-yl)acrylate 31 (yield: 80\%) was prepared from 5-phenyl-2-furaldehyde (3) by Reformatsky reaction (Scheme 31)\(^{(52)}\).

**Scheme 31**

5-Phenyl-2-furaldehyde (3) was coupled with isoprene to form 2,3-dimethyl-1-(5-phenylfuran-2-yl)but-3-en-1-one (32) in good yield (90\%). This coupling reaction was accomplished using ruthenium dihydride complex RuH\(_2\)(CO)(PPh\(_3\))\(_3\) catalyst activated by trifluoroacetic acid (Scheme 32)\(^{(53)}\).

**Scheme 32**

Hydrazide and hydrazone derivatives

5-Phenyl-2-furaldehyde (3) reacted with hydroxylamine hydrochloride in the presence of sodium acetate in ethanol to yield (E)-5-phenylfuran-2-carbaldehyde oxime (33) (Scheme 33) (54).

\[
\begin{align*}
\text{5-Phenyl-2-furaldehyde} (3) \text{ reacted with hydroxylamine hydrochloride in the presence of sodium acetate in ethanol to yield (E)-5-phenylfuran-2-carbaldehyde oxime (33).}
\end{align*}
\]

A series of 5-phenyl-2-furancarbaldehyde 2,6-dialkylphenylhydrazone (34a-c) was prepared in excellent yield by the reaction of 5-phenyl-2-furaldehyde (3) with 2,6-dialkylphenylhydrazine. On the other hand, 5-phenyl-2-furancarbaldehyde dimethylhydrazone (35) was prepared by the reaction of 3 with N,N-dimethylhydrazine in refluxing toluene in the presence of catalytic amount of 4-methylbenzenesulfonic acid (Scheme 34) (55).

\[
\begin{align*}
\text{A series of 5-phenyl-2-furancarbaldehyde 2,6-dialkylphenylhydrazone (34a-c) was prepared in excellent yield by the reaction of 5-phenyl-2-furaldehyde (3) with 2,6-dialkylphenylhydrazine. On the other hand, 5-phenyl-2-furancarbaldehyde dimethylhydrazone (35) was prepared by the reaction of 3 with N,N-dimethylhydrazine in refluxing toluene in the presence of catalytic amount of 4-methylbenzenesulfonic acid.}
\end{align*}
\]

Reaction of 5-phenyl-2-furaldehyde (3) with arylsulfonylhydrazides in anhydrous ethanol afforded a series of the corresponding arylsulfonylhydrazones (36) (Scheme 35) (56).

\[
\begin{align*}
\text{Reaction of 5-phenyl-2-furaldehyde (3) with arylsulfonylhydrazides in anhydrous ethanol afforded a series of the corresponding arylsulfonylhydrazones.}
\end{align*}
\]
The reaction of 5-phenyl-2-furaldehyde (3) with substituted furan[3,2-b]pyrrole-5-carbohydrazide in the presence of p-toluenesulfonic acid led to N'-[(5-phenylfuran-2-yl) methylene] -4H-furo[3,2-b] pyrrole-5- carbohydrazide derivatives (37a-d) (Scheme 36)\(^{(57)}\).

\[
\begin{align*}

\end{array}
\end{align*}
\]
The condensation of 5-phenyl-2-furaldehyde (3) with 3-aminopropanol at room temperature in the presence of a dehydrating agent (MgSO₄) yielded 3-[(5-phenylfuran-2-yl)methyleneamino]propan-1-ol (41) and 2-(5-phenyl-2-furyl)-1,3-oxazinane (42) in an equilibrium mixture (Scheme 40) (60).

Furfuryl alcohol derivatives
The preparation of 2-hydroxymethyl-5-phenylfuran (43) from 5-phenyl-2-furaldehyde (3) processed via (i) the reduction by using sodium borohydride NaBH₄ (61); (ii) the reduction by LiAlH₄ (high yield 96%); (iii) modified Cannizzaro reaction (62) (Scheme 41).

1-(5-Phenylfuran-2-yl)ethanol (44) was prepared by the reaction of 5-phenyl-2-furaldehyde (3) with methyl magnesium bromide CH₃MgCl in absolute Et₂O (yield: 58%) (Scheme 42) (63).

5-Phenyl-2-furaldehyde (3) was converted to (S)-hydroxy(5-phenylfuran-2-yl)acetonitrile (45) by enzyme catalysis (Scheme 43) \(^{(64)}\).

\[
\begin{array}{c}

\end{array}
\]

**Furancarboxylic acid derivatives**

5-Phenyl-2-furancarboxylic acid (46) was prepared via the oxidation of 5-phenyl-2-furaldehyde (3) or by basic hydrolysis of 5-phenyl-2-furonitrile (47) which was prepared through heating of 3 in pyridine with hydroxyl ammonium chloride in acetic anhydride at temperatures not exceeding 95°C \(^{(65)}\). Also, 5-phenyl-2-furancarboxylic acid (46) can be prepared by coupling of benzene diazonium chloride (1) with 2-furancarboxylic acid in the presence of cupric chloride (Scheme 44) \(^{(66)}\).

\[
\begin{array}{c}
\text{Scheme 44}
\end{array}
\]

5-Phenyl-2-furaldehyde (3) was transformed into 2-amino-3-(5-phenylfuran-2-yl)propanoic acid (48) via multi-steps reaction (Scheme 45) \(^{(67)}\).

\[
\begin{array}{c}
\text{Scheme 45}
\end{array}
\]

**Furyl benzothiazole or benzimidazole derivatives**

5-Phenyl-2-furaldehyde (3) reacted with 2-methylbenzothiazole in the presence of anhydrous ZnCl\(_2\) on heating to 120-180 °C without a solvent to form 2-[2-(5-phenyl-2-furyl)ethenyl]benzothiazole (49) (Scheme 46) \(^{(45)}\).

\[
\begin{array}{c}
\text{Scheme 46}
\end{array}
\]
2-(5-Phenyl-2-furyl)benzothiazole (50) (yield: 25%) was prepared from the reaction of 5-phenyl-2-furaldehyde (3) with o-aminothiophenole in pyridine (Scheme 47)\(^{(68)}\).

\[
\begin{array}{c}
\text{H}_2\text{N} \quad \text{HS} \\
\text{Pyridine}
\end{array}
\]

The cyclization of 5-phenyl-2-furaldehyde (3) with 1,2-phenylenediamine or 4-nitro-1,2-phenylenediamine yielded 2-(5-phenyl-2-furyl)benzimidazole (51a) or 2-(5-phenyl-2-furyl)-5-nitrobenzimidazole (51b), respectively, (Scheme 48)\(^{(69)}\).

\[
\begin{array}{c}
\text{H}_2\text{N} \\
\text{X= H or NO}_2 \\
\text{a; X= H} \\
\text{b; X= NO}_2
\end{array}
\]

Fused derivatives

The treatment of 5-phenyl-2-furancarbaldehyde (3) with methyl- or ethyl azidoacrylate at 0°C in methanol containing sodium metal gave methyl 2-azido-3-(5-phenyl-2-furyl) acrylate (52a) or ethyl 2-azido-3-(5-phenyl-2-furyl) acrylate (52b), respectively\(^{(70-73)}\). The thermolysis of 52a or 52b in boiling toluene led to methyl 4H-2-phenyl-furo[3,2-b]pyrrole-5-carboxylate (53a) or ethyl 2-phenyl-furo[3,2-b] pyrrole-5-carboxylate (53b), respectively\(^{(70-72)}\). Ethyl 2-azido-3-(5-phenyl-2-furyl) acrylate (52b) reacted with triphenylphosphine in dry dichloromethane to give ethyl 2-triphenylphosphoimino-3-(5-phenyl-2-furyl) acrylate (54) which reacted with phenyl isocyanate in dry toluene under reflux to give ethyl 2-phenyl-4-phenylaminofuro[3,2-c]pyridine-6-carboxylate (55) (Scheme 49)\(^{(73)}\).

Bis and tris derivatives

The conversion of 5-phenyl-2-furancarbaldehyde (3) into 2-hydroxy-1,2-bis(5-phenylfuran-2-yl)ethanone (56) takes place in the presence of a base (Et₃N) and thiazolium salt (74). Also, 5-phenyl-2-furancarbaldehyde (3) was converted into tris(5-phenyl-2-furyl)methane (57) by the reaction with ethylene glycol (Scheme 50) (75).
Moreover, 3-((1H-indol-3-yl) (5'-phenylfuran-2'-yl) methyl)-1H-indole (58) (yield: 50%) was obtained by the condensation of 5-phenyl-2-furancarbaldehyde (3) with indole in dry methanol in the presence of potassium hydrogen sulfate (Scheme 51) (76).

![Scheme 51](image1)

Metal complex
2-(5'-Phenylfuran-2'-yl)-1H-imidazo [4,5-f][1,1'] phenanthroline (59) (yield: 60%) was prepared by the reaction of 5-phenyl-2-furancarbaldehyde (3) with 1,10-phenanthroline-5,6-dione and ammonium acetate in refluxing glacial acetic acid via the Radziszewski reaction. The complex 60 (yield: 96%) was obtained by the direct reaction of the ligand 59 with Ru(bpy)$_2$Cl$_2$ in ethylene glycol under microwave irradiation for 2 min (Scheme 52) (77).

5-Phenyl-2-furaldehyde derivatives exhibit a wide spectrum of pharmacological activities.

**Antibacterial activity**

2-[(6,8-Dibromo-2-methylquinazolin-4-yl)oxy]-N’-[5-phenylfuran-2-yl]methylene]acetohydrazide (38) showed good antibacterial activity against Gram positive and Gram negative bacterial species\(^\text{[12]}\). Also, (Z)-3-methyl-2-(4-oxo-5-((5-phenylfuran-2-yl) methylene)-2-thiothiazolidin-3-yl)pentanoic acid (27a) and (Z)-2-(4-oxo-5-((5-phenylfuran-2-yl) methylene)-2-thiothiazolidin-3-yl)-3-phenylpropanoic acid (27b), exhibited moderate levels of inhibition against the two Gram-positive bacterial strains (*S. aureus* KCTC 209 and *S. aureus* KCTC 503)\(^\text{[47]}\).

\[ \text{Antibacterial activity} \]

![](image1.png)

**Antitumor activity**

(Z)-2-(3,4-Dichlorophenyl)-3-(5-phenyl-2-furyl)acrylonitrile (21) was found to have antitumor activity against a panel of eleven cancer cell lines {HT29 and SW480 (colon carcinoma), MCF-7 (breast carcinoma), A2780 (ovarian carcinoma), H460 (lung carcinoma), A431 (skin carcinoma), DU145 (prostate carcinoma), BEC-2 (neuroblastoma), SJ-G2 (glioblastoma), MIA (pancreatic carcinoma) and SMA (spontaneous murine astrocytoma)}\(^\text{[13]}\).

\[ \text{Antitumor activity} \]

![](image2.png)

**Inhibition of the enzymes**

5-[(5-Phenyl-2-furyl)methylene]thiazolidine-2,4-dione (24) has been found as potent and selective inhibitor of phosphoinositide 3-Kinase \(\gamma\)\(^\text{[14]}\). Also, (Z)-4-methyl-N-(2-oxo-5-((5-phenylfuran-2-yl) methylene)-2,5-dihydrothiazol-4-yl)benzenesulfonamide (28) is an inhibitor of HCV NS5B polymerase\(^\text{[15]}\). Moreover, \(N\)-[3-benzoyl-4- (4-tolylacetylaminophenyl ]-3-(5-phenyl-2-furyl) acrylic acid amide (61) is an inhibitor of non-thiol farnesyltransferase\(^\text{[16]}\).

\[ \text{Inhibition of the enzymes} \]
Conclusion

5-Phenyl-2-furaldehyde has high chemical reactivity due to the presence of the formyl group. This survey is attempted to summarize the synthetic methods, reactions and pharmacological activities of 5-phenyl-2-furaldehyde from 1950 till 2014. From this review, it can be concluded that 5-phenyl-2-furaldehyde and its derivatives display a wide range of pharmacological activities, e.g. antimicrobial and antitumor. They also show inhibition of the enzymes, especially phosphoinositide 3-Kinase γ, HCV NS5B polymerase and non-thiol farnesyltransferase. For that, 5-phenyl-2-furaldehyde and its derivatives have attracted increasing attention of the scientists for the search of new potent pharmacological activity and medicinal activities.

5-فینیل-2-فیورالدهید: تحضیر وتفاعلات والأنشطة البيولوجية

أشرف سيد حسن، سعاد عبدالحليم عثمان وتغريد شكري حافظ
قسم الكيمياء العضوية الفلزية والعضوية شبة الفلزية - المركز القومي للبحوث - شارع البحوث - الدقي - الجيزة - مصر.

نظراً لأهمية المركب 5-فینیل-2-فیورالدهید في تحضير المركبات الحلقاتية غير المتجانسة والتي تتميز بخواصها البيولوجية والطلبية العديدة كمضادات للميكروبات والأورام وغيرها فقد قمنا في هذا البحث المرجعي بالتركيز على بعض طرق تحضیره وتفاعله مع مركبات مختلفة بالإضافة إلى أنشطة البيولوجية.
